Summary

Software Engineer (B.E. in Information Science and Engineering, CGPA 8.07/10) with hands-on experience shipping a production Android app in Kotlin with Generative AI integration (Gemini API), build and deployed full-stack ML web application (Flask, TF-IDF, LSTM) reaching 90%+ test accuracy. Comfortable picking up new languages and stacks quickly (Java, Python, Kotlin, C/C++, SQL); has solved 100+ Data Structures & Algorithms problems on LeetCode to build strong problem-solving fundamentals. Seeking a Software Developer role where strong fundamentals and shipped product experience drive real impact.

Education

B.E in Information Science and Engineering <i>JSSATE Bangalore</i>	2022-2026 <i>CGPA: 8.07 / 10</i>
XII (State Board) <i>JKBOSE</i>	2021 <i>86%</i>
X (State Board) <i>JKBOSE</i>	2019 <i>87%</i>

Technical Skills

Languages: Java, Python, C/C++, SQL, Kotlin, JavaScript
Full-Stack & APIs: React, HTML/CSS, Flask, REST API integration, HTTP/JSON, Generative AI APIs (Gemini API), MySQL, MongoDB, Android SDK, Room, MVVM, Material Design
Cloud & DevOps: Google Cloud Platform (GCP), Git/GitHub, Docker, Gradle, Salesforce
Data & ML: Scikit-learn, TensorFlow/Keras, Pandas, EDA, Machine Learning, Deep Learning, NLP, Power BI, Tableau
Programming Fundamentals: Data Structures & Algorithms, Object-Oriented Programming (OOP)

Experience

Android App Developer Intern <i>MindMatrix.io (CL Infotech Pvt. Ltd.), Bangalore</i>	Feb 2026 – May 2026 <i>Capstone: Jan-Aushadhi Finder, a healthcare savings app</i>
- Built a native Android app in Kotlin following MVVM architecture (Android Studio, XML layouts, Material Design) that helps users find generic alternatives to branded medicines, compare prices, and calculate savings, supporting the Government of India's PMBJP initiative. - Integrated the Gemini API (Google AI Studio) to power AI-based medicine-name suggestions on top of a fuzzy-search algorithm, improving usability for users who mistype or don't know exact spellings. - Built a GPS-based store locator using Google Play Services Location APIs and Google Maps integration, letting users find nearby Jan-Aushadhi Kendras within configurable 2/5/10 km ranges with live navigation. - Implemented medicine refill reminders (WorkManager, NotificationChannel) and offline-first data handling using Room database and SharedPreferences for local caching, ensuring usability in low-connectivity, rural-area conditions. - Handled networking via HttpURLConnection/JSON, collaborated with mentors through code reviews, and completed structured learning via Google Developer Codelabs, earning Google Skills Badges.	

Projects

Fake News Classifier Python, Flask, TensorFlow/Keras	Sept 2025 – Nov 2025
- Built a Flask web application that classifies news articles as REAL or FAKE, with an NLP preprocessing pipeline (tokenization, stop-word removal, lemmatization, TF-IDF vectorization) over a balanced dataset of 7,256 labeled articles drawn from the LIAR, ISOT, and Kaggle Fake News datasets. - Trained and compared 4 ML baselines (Naive Bayes, Logistic Regression, SVM, Random Forest) against an LSTM deep learning model; the LSTM model achieved 90%+ test accuracy, outperforming all traditional baselines. - Added a live-news mode that fetches and auto-classifies current articles via a News API alongside manual text input, and implemented secure user authentication with hashed credential storage on a SQLite/MySQL backend.	
Book Recommendation System Python	Jan 2025 – Mar 2025
Trained a recommendation model using Scikit-learn and Scipy for data processing. Utilized Collaborative Filtering to suggest personalized book recommendations. Developed an interactive interface with Streamlit to generate real-time book suggestions. Used K-Nearest Neighbors (KNN) Algorithm.	

Certifications

Google AI Essentials — Coursera (2024) | Foundations of Cybersecurity — Coursera (2024) | Tools of the Trade: Linux and SQL — Coursera (2024) | AI Search Methods For Problem Solving — IIT Madras (2025)
